Aviation Noise Monitoring

The Phoenix Sky Harbor International Airport Noise and Flight Track Monitoring System (NFTMS) has 8 fixed Noise Monitoring Sites (NMS) in Tempe located in neighborhoods around the Town Lake/ Rio Salado area in proximity of the 65 DNL noise exposure contour line for the airport. Through an agreement made with the City of Phoenix the City of Tempe can access noise monitoring data collected by the system and use supporting software that filters the data to indentify the noise energy contributions attributed to aircraft operations over areas the monitors are located.

A. Weighted Sound Exposure Levels

Average monthly sound exposure levels of aircraft events, are calculated from the Ldn or day-night average sound level also called DNL. This is a summary description of noise based on long-term equivalent level (Leq) with a penalty of 10 dB (A) added for nighttime sound occurring between 22.00-07.00 hours. Average sound levels created by aircraft, Ldn A, are a product of detection tools built in to the NFTMS, which separate events registered at the monitoring site. The ambient sound events from all sources picked up at a monitoring site other than from aviation is the Ldn C. The sound events the NFTMS attributes to aircraft sound is the Ldn A. Ldn T is an expression of the total sound from all sources including aircraft noise.

Ldn A decreases with the distance to the airport's runways. The monitored standard deviations are naturally higher for the monitors located at sites in Tempe located outside the downtown area south of the riverbed, where the distances to the aircraft as one of the sources of noise in the local environment are greater. Site 9 was

down through the third quarter.

B. East – West Equalization of Noise Burden

The airport Air Traffic Control Tower is directing large carrier departure traffic with the goal of accomplishing a 50/50 annualized east west split. A procedure for noise mitigation over Tempe delay air carrier turns away from the Salt River to the airspace over the Highway 202/ 101 intersection. There is no similar constraint for departure headings towards the west.

Departure flow east and west are determined over the year by daily and seasonal changes in wind directions, and the cities of Tempe and Phoenix has agreed that airport should attempt to distribute the noise burden from departing large commercial aircraft equally east and west on an annual basis.

The flow of commercial air carrier and corporate jet departures continued to go in westerly directions the third quarter of 2013. East departures increased by 5.1% and west departures decreased by 9.7% compared to the second quarter of 2013.

Over the quarter as a whole departures occurring between 10:00 p.m. to 7:00 a.m. increased towards the east with 5.1% and decreased towards the west by 11.8% compared to the second quarter of 2013.

10/31/2013

Except for site 9 that was off line, monitors along the south side of the Tempe Town

Lake area showed on average lower Ldn A sound energy level during the third quarter.

C. Registered Maximum Sound Energy Levels

The number of higher sound energy level events attributed to airline operations varies each month, which influences monthly Ldn average levels. Lmax is the maximum A- weighted sound level, dB (A) registered during a particular sound event. A-weighted means the sound is measured at frequencies that reflect the sensitivity ranges of the human ear.

	20	40	60	80	1

American Airlines has the most registrations of high Lmax levels over Tempe, but was down to 28 from 159 single events that exceeded 85dB Lmax during the second quarter.

> UAL: United SKW: Sky West HAL: Hawaiian ELX: Elan Express BAW: British Airways AWE: US Airways AAY: Allegiant AAL: American

The highest single noise event registered during the quarter, military aircraft excluded, was 90.8 dB A, (Lmax) from an US Airways Airbus 319 over Tempe Beach Park in 9:37 a.m. on July 8, 2013.

The event above was also the highest single noise event at the lowest altitude.

Information about the NFTMS and the City of Tempe agreement with the City of Tempe are available at <u>www.tempe.gov/aircraftnoise</u>.
